

**FIGURE 1**

10

FIGURE 1 is a block diagram of a system architecture for handling HTML and Non-HTML content. The system includes a Client (12) and a Terminal (26) containing a browser (28), both connected via a Network (54) to a Server (14). The Server (14) contains an HTTP Server Module (30), an Interface Module (32), and a Non-HTML Server Module (24). The Interface Module (32) includes a URL Interface (48) and an HTML Translator (44). The Non-HTML Server Module (24) is connected to a Non-HTML Database (16). The Non-HTML Database (16) contains two data blocks: one with '18a-18n' and '62a-62n', and another with '20' and '22a-22n'. The HTTP Server Module (30) is connected to an HTML Database (10). The HTML Database (10) contains an Index (48) with entries '50n', '50a', and '50n', and a Link (66a) pointing to '50a'. The Index (48) also includes a '64' entry. The Link (66a) points to a box containing '50a' and '52'. The HTML Database (10) is also connected to HTML Objects (50a-50n). The Terminal (26) is connected to the Network (54) and the HTML Database (10).
